

Exercise 16 Answers

Advanced packages

1. Here is the file `X.java` after all changes have been made:

```
package stuff;

public class X {
    int aProperty;
    public X(int initialValue) {
        aProperty = initialValue;
    }
    public void aMethod() {
        System.out.println("class X's aMethod called");
        System.out.println("aProperty = " + aProperty);
    }
}
```

- Here is the file `Test.java` after all changes have been made:

```
import stuff.X;

class Test {
    public static void main(String[] args) {
        X x = new X(42);
        x.aMethod();
    }
}
```
